

MAINCRAFTS TECHNOLOGY | INTERNSHIP PROGRAM

THREAT INTELLIGENCE REPORT 2024–2025

Cybersecurity Awareness & Research Project | Task-1

TABLE OF CONTENTS

01

Introduction to Cybersecurity

02

5 Major Modern Cyber Threats

03

Impact Analysis Summary

04

Real-World Case Studies

05

Key Preventive Measures

06

Conclusion & Future Scope

| 01 | WHAT IS CYBERSECURITY?

The practice of protecting systems, networks, and data from digital attacks. It encompasses technologies and processes designed to safeguard digital infrastructure in an age of rising dependency.

- Protects personal and financial data assets
- Ensures business continuity and trust
- Mandatory compliance with global regulations

\$10.5T

ANNUAL CRIME COST (2025)

2,200+

DAILY CYBERATTACKS

95%

HUMAN ERROR BREACHES

AI

POWERED THREAT EVOLUTION

02 | 5 MAJOR MODERN CYBER THREATS

AI-Powered Phishing

Social engineering and deepfakes via machine learning.

Ransomware (RaaS)

Criminal business kits for extortion at scale.

Cloud Misconfigs

Poor access controls in AWS, Azure, and GCP buckets.

IoT Vulnerabilities

Smart device compromise and botnet recruitment.

Zero-Day Exploits

Attacking unknown and unpatched vulnerabilities.

T1 | AI-POWERED PHISHING ATTACKS

Impact Analysis

Credential theft, voice/video impersonation, and Business Email Compromise (BEC) causing millions in damage.

Case Study: Twitter Bitcoin Scam (2020)

Hijacked 130 high-profile accounts including Elon Musk and Obama. Stole \$120,000+ in hours using social engineering.

Prevention

MFA, AI-based email filters, and DMARC/SPF authentication.

What is Deepfake Phishing Simulation?

T2 | RANSOMWARE- AS-A-SERVICE

Criminal Democratization

RaaS is a business model where developers lease malware. Affiliates launch attacks without needing high technical skill.

Case Study: WannaCry (2017)

Infected 230,000+ computers in 150 countries. Crippled the UK NHS; damages of \$4–8 billion.

Prevention Strategy

- Regular offline backups (3-2-1 rule)
- Patch Management for OS vulnerabilities
- Endpoint Detection & Response (EDR)

03 | IMPACT ANALYSIS SUMMARY

CYBER THREAT	INDIVIDUAL IMPACT	ORGANIZATIONAL IMPACT	SEVERITY
AI Phishing	Fraud, Identity Theft	BEC, Data Exfiltration	CRITICAL
RaaS	Extortion	Operational Shutdown	CRITICAL
Cloud Misconfig	Exposure of PII	GDPR Fines, IP Loss	HIGH
IoT Vulnerabilities	Privacy Invasion	DDoS, Critical Infra Damage	HIGH
Zero-Day	Spyware, Takeover	APT, Espionage	CRITICAL

05 | KEY PREVENTIVE MEASURES

Zero Trust

Never trust, always verify. No implicit trust for any user or device.

MFA Implementation

Blocks 99.9% of automated credential-based attacks.

Patch Management

Automated patching of OS and apps to close known flaws.

Awareness Training

Phishing simulations reduce human error (95% of breaches).

Firewalls / IPS

Deep packet inspection layers for network perimeter defense.

Response Plan

Tested Incident Response (IR) plans reduce costs by 35%.

Conclusion

"The threat landscape never stops evolving — and neither should your defenses."
